

How to use Qmanja Signage

Your quick-start guide & feature handbook — set up a screen and go live in minutes.

Manage every TV at your outlets from one cloud dashboard — media, playlists & live content, 24/7.

Dashboard: manage.mediabridge.qmanja.solutions Website: mediabridge.qmanja.solutions

How it works

You manage everything from the cloud dashboard. A small player app on each TV pulls your content and plays it — connected with a simple pairing code.

1 Cloud dashboard

Upload media, build playlists and decide what plays where — from any browser.

2 Pairing code

Each TV's player app shows a short code. Enter it once to link the TV to your account.

3 Live on the TV

The screen plays your playlist on a loop, 24/7 — change it anytime from the dashboard.

Tip: a first-time “Get started” checklist on your dashboard walks you through these steps and ticks each one off automatically as you go.

Quick start in 5 steps

1

Create your first outlet

An outlet is a location — a shop, branch or office. Everything is organised by outlet.

2

Connect a screen

Install the Qmanja player app on your TV, then enter the pairing code it shows (see next page).

3

Upload your media

Add the images and videos you want to show — or paste a live link (YouTube / web).

4

Build a playlist

Arrange your media into a running order that loops on the screen.

5

Push the playlist to your screen

On the Screens page, pick the playlist for your screen and push it — it goes live instantly.

Connect your TV

1

Install the player

On your TV or TV-box (Android TV, Fire TV, Windows, Tizen, webOS...) install and open the Qmanja Signage player app.

2

Read the pairing code

The app shows a short code on screen, e.g. ABC123.

3

Enter it in the dashboard

Go to Screens > Connect a screen, choose the outlet, and type the code.

4

You're live

The TV is now paired and plays whatever you push to it. Re-opening the app stays paired automatically.

Good to know

- Each paired screen uses one licence (see Billing to add more).
- No code? Make sure the TV has internet and re-open the player app.
- The same code links the screen to whichever outlet you choose.
- You can rename, preview and re-assign a screen anytime.

Download the player

Install on any device below. Every player is also available here: signage.qmanja.solutions/players

Android TV & Fire TV

Most popular — install on any Android TV or Fire TV Stick and pair with a code.

[Get it →](#)

Google Play

Android phones, tablets & TV boxes from the Play Store.

[Open Play Store →](#)

Windows

A self-contained Windows player — great for kiosks, mini-PCs & existing displays.

[Download →](#)

Web browser

Zero install — open the web player in any modern browser to run a screen.

[Open web player →](#)

macOS / iOS / iPadOS

Native players for Mac, iPhone & iPad — turn any Apple device into a screen.

[View options →](#)

Samsung Tizen / LG webOS

Native app packages for Samsung & LG commercial displays — no extra hardware.

What you can do (1 of 2)

Outlets

Group your screens by location and control access per location.

Screens

Pair, live-preview, set fit/fill, orientation, brightness & a power schedule.

Media

Upload images & videos, organise in folders, or add live links (YouTube/HLS/web).

Playlists

Set order & durations, transitions, background music and clock/weather/ticker widgets.

Schedules

Play different content by time of day and day of week — automatically.

Groups

Put many screens in a group so they all play the same playlist at once.

What you can do (2 of 2)

Video Wall

Split one playlist across a grid of screens for a true video-wall effect.

Layouts

Divide a single screen into zones, each playing its own playlist or live stream.

Proof of Play

Reports of what played, when and for how long — per screen and per media.

Screen usage

Uptime vs each outlet's operating hours — online, offline & coverage %.

Activity log

Who-did-what history for your account (admins only), kept for 30 days.

Billing

Add screen licences and storage as you grow — pay online, instant activation.

Tips & support

Hover for help

Stat cards, buttons and section titles show a tooltip on hover — hints are everywhere.

Offline alerts

We email you when a screen has been offline for a while, so you catch outages fast.

First-run checklist

New accounts get a “Get started” guide on the dashboard that ticks off as you set up.

Never crop by default

Playlists fit your media and blur-fill the gaps — turn on Fill to crop-to-cover per screen.
